# EUROCOM Racer 4W

Industrial Strength Portable Computing

The EUROCOM Racer 4W represents that rare combination of form meets function, where the radically powerful internal components of this system are contrasted against the conservative style of the exterior case.

If you need a system that will travel with you, while delivering all the power you need to do your job - without the flash and the need to advertise how much your tools cost, then the Racer is for you.

Engineered around the highest spec mobile components available today and tomorrow, the Racer 4W is Industrial Strength computing for the 21st century.

Built-in ONKYO Speakers (2.5W) (22W)+ Subwoofer (2.5W)
