

# EUROCOM P7 Pro

**Take  
anywhere  
workstation**

## **The Perfectly Powerful Mobile Workstation**

The EUROCOM P5 and P7 Pro have Intel® Core™ i7-4700 Desktop Processor Series support from an Intel Z97 Express Chipset and LGA 1150 socket. Memory is fully upgradeable and configurable with four SODIMM sockets able to support up to 32 GB of memory.

Storage comes by way of four drive bays, two M.2. SSD slots and 2 standard drive bays for up to 4.5 TB of RAIDable storage. PCIe Solid State drives are supported for enhanced storage performance.

An innovative single copper heat-sink design, for both the CPU and GPU, with 7 heat pipes was designed for enhanced cooling capabilities in the small form factor chassis in order for the P5 and P7 Pro laptops to support NVIDIA GeForce 980M and Intel Core i7-4700 Desktop Processor series.

Heavy Duty ABD plastic is used in the chassis to provide a very rugged, yet sleek case that is perfect for professionals and enthusiasts alike.

**W**e are trying to lead a Renaissance of Upgradeability by allowing users to extend the life of their laptop through future proof component upgrades.

We want customers to love their laptop, customize their laptop and upgrade their laptop.

Mark Bialic, Eurocom President
